Changing Your Nameservers

1. On the 'Review your DNS records' page, scroll down and click "Continue"
2. Open a new tab and go to your domain registrar. For most of you, this will be BlueHost but you may have purchased your domain from another registrar such as GoDaddy or Hostgator.

Changing Your Nameservers

1. On the 'Review your DNS records' page, scroll down and click "Continue"
2. Open a new tab and go to your domain registrar. For most of you, this will be BlueHost but you may have purchased your domain from another registrar such as GoDaddy or Hostgator.
3. Click on 'Domains' from the menu on the left side of the page
4. Click the arrow next to 'Manage' and select 'DNS' from the drop down

Changing Your Nameservers

5. Click 'Edit' in the upper right corner of the 'Name Servers' box
6. Select 'Custom' under 'Setup Type'
7. Go back to the screen you left off with on cloudflare.com and copy 'Nameserver 1'

2. Replace with Cloudflare's nameservers:

 Nameserver 1

cameron.ns.cloudflare.com

Click to copy

 Nameserver 2

isabel.ns.cloudflare.com

Click to copy

Check to make sure they're correct, then **Save your changes.**

Registrars typically process nameserver updates within 24 hours. Once this process completes, Cloudflare confirms your site activation via email.

Done, check nameservers

FULLSTAQ MARKETER

The hard part is done!

10. Keep your Cloudflare tab open. Check back in about an hour and click 'Done, check nameservers'

IMPORTANT NOTE:

It may take up to 24 hours for the Name Server change to be complete. Keep checking back with Cloudflare and click on 'Done check nameservers' until it registers as complete

Final Step

11. Cloudflare will ask you some questions about the security of your new domain. The default settings are correct so make sure not to change anything. Scroll down and click 'Done' to finish set up.
