

Set up WordPress Plugins

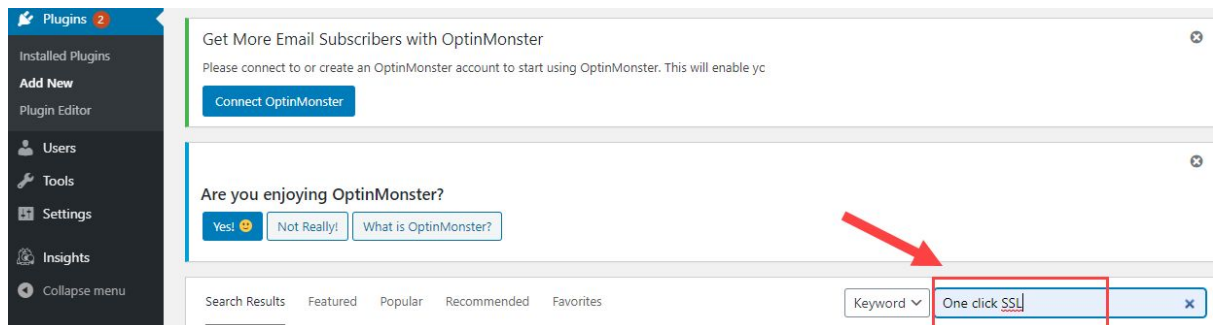

(Log into Wordpress to complete the Plugin Installations)

1. Install One Click SSL Plugin

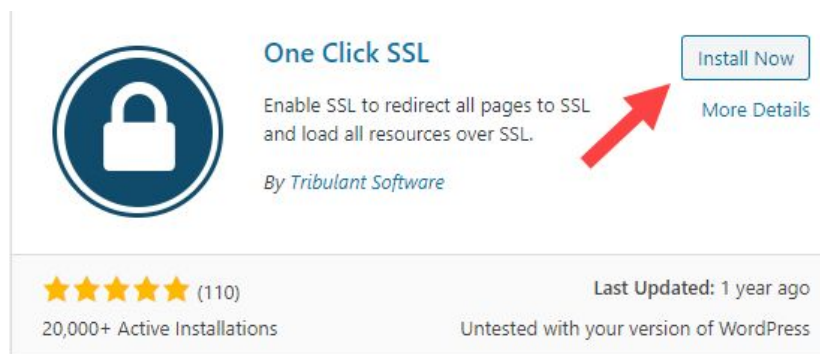

- a. From the left hand side menu, **select Plugins**, then **select Add New**

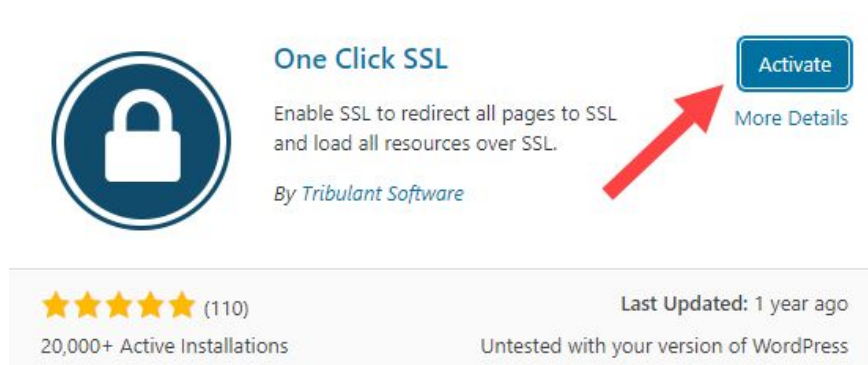

b. In the Search bar, type in **One Click SSL**

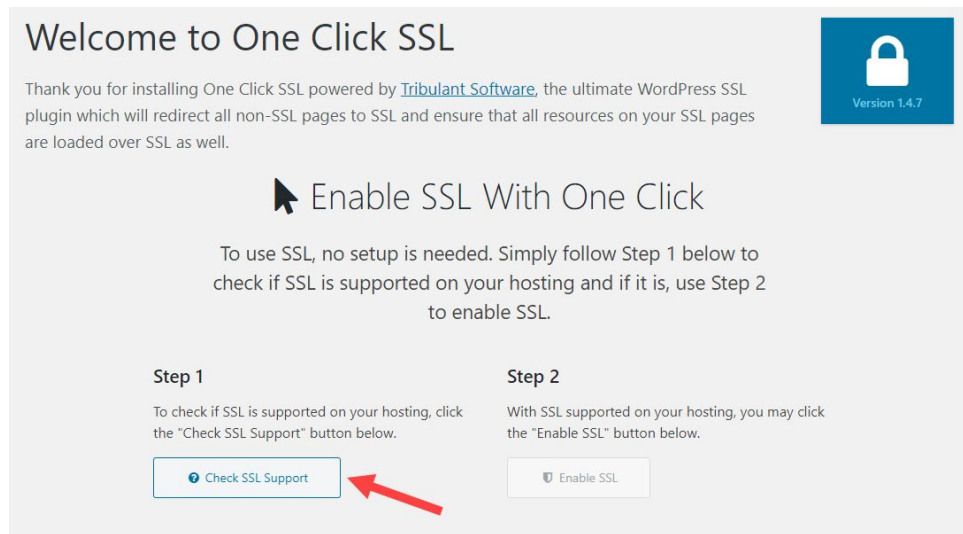

c. Once you have located **One Click SSL**, click on the **Install Now** button.

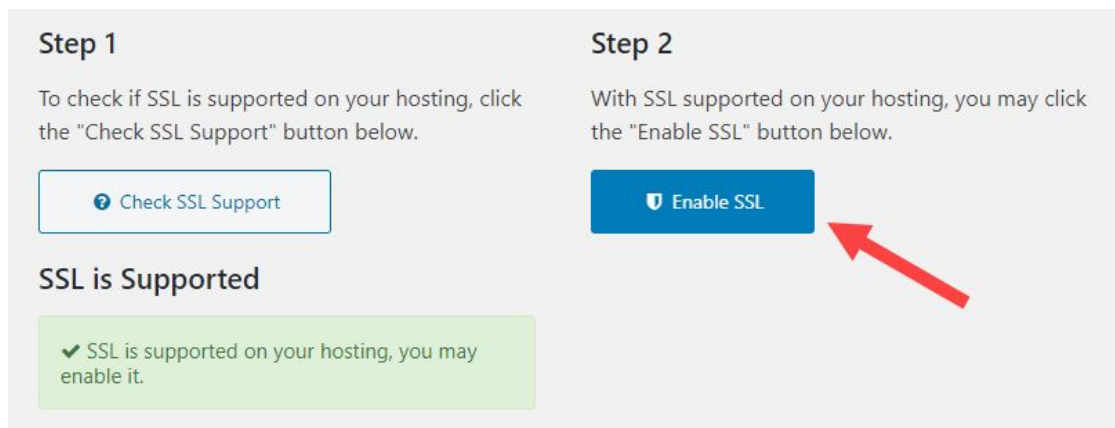

d. Once the plugin has completed installing, click on **Activate**.

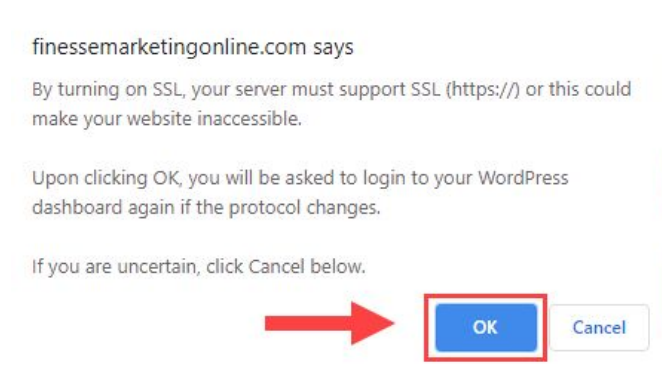

- e. A new screen opens with the title 'Welcome to One Click SSL'. Click on the '**Check SSL Support**' button.

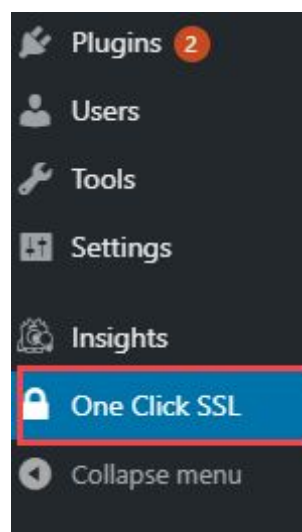

- f. The system will do a check and let you know that SSL is supported on your hosting as seen in the green box below. Next click on the '**Enable SSL**' button.

- g. A pop up box will open (with your domain name) providing you with one more notification that your server must support SSL. Click the blue '**OK**' button.

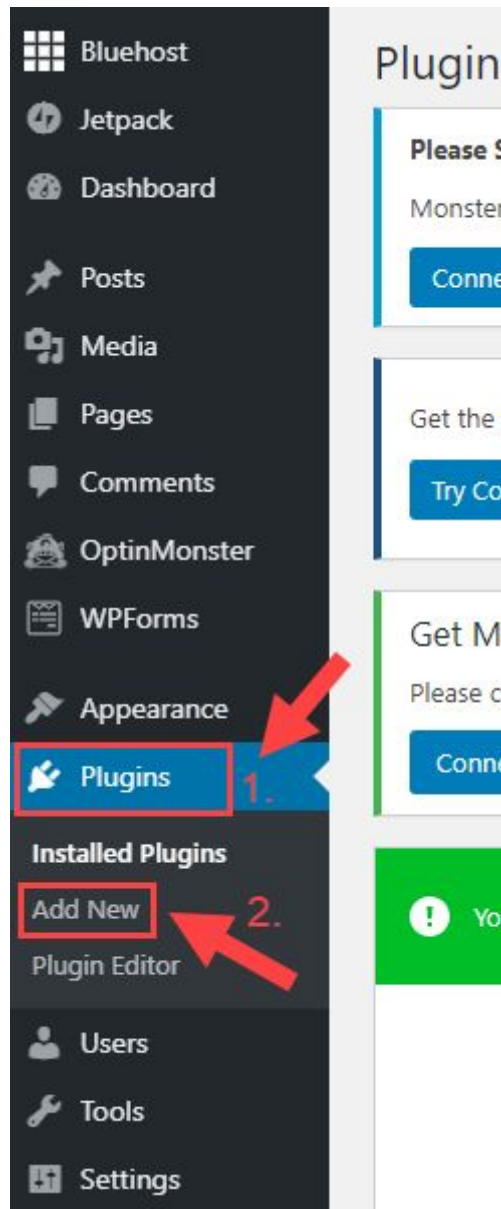

- h. You will now see One Click SSL in your menu on the left hand side.

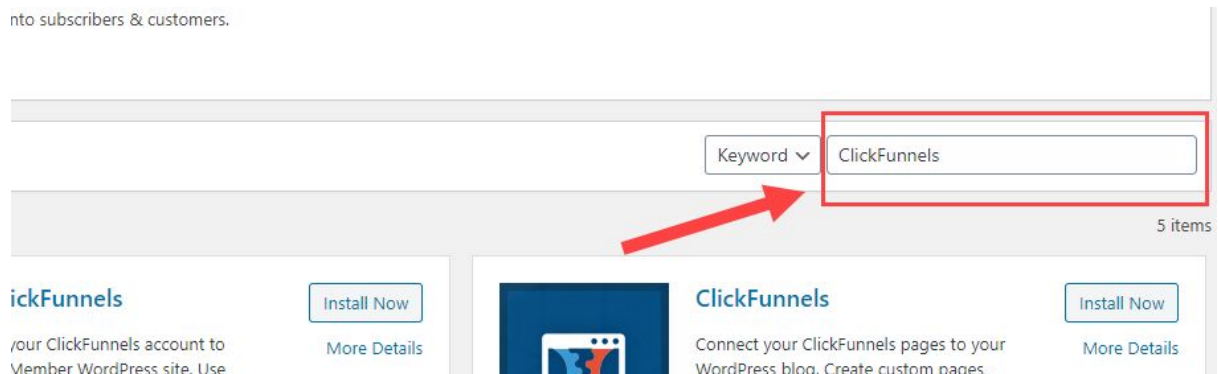

2. Install ClickFunnels Plugin

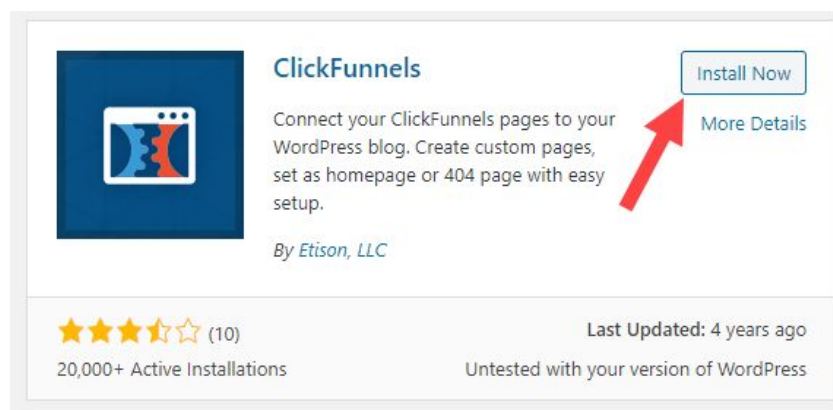

- a. From the left hand side menu, select Plugins, then select Add New

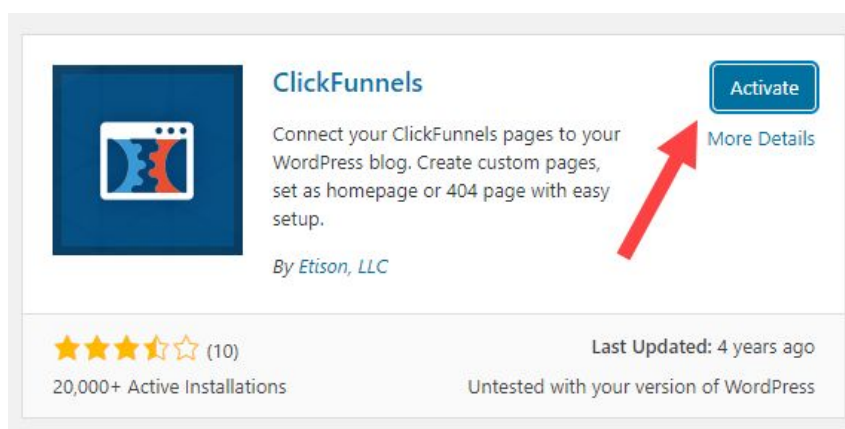

- b. In the Search bar on the right hand side, type in ClickFunnels

- c. Once you have located the ClickFunnels plugin (dark blue icon), click on the **Install Now** button.

- d. Once the plugin has completed installing, click on **Activate**.

e. You will now see the ClickFunnels plugin in the menu
